HOME HEALTH MEDICATION MANAGEMENT SERVICE

Holland Hospital Home Health Services offers a medication management service to assess and proactively manage all of your medications.

Why is Medication Management Important?

- According to the Kaiser Family Foundation, Michigan residents age 65 and older filled an average of 25 prescriptions in 2009. With that number of prescribed medications, combined with any over-the-counter and herbal products, the risk of an adverse drug interaction is a significant concern.
- The safe, appropriate, and effective use of medications improves the overall quality of care and life, and can lead to better outcomes when managing health problems.
- Health care costs associated with physician visits, urgent/emergency care visits and hospitalizations can be reduced through proper management and use of prescription and over-the-counter medications.

Our Medication Management Staff:

- Will review your medications for any potential adverse interactions as part of your overall comprehensive health assessment.
- Will work with you to develop a medication schedule tailored to your needs, helping you take the right medications at the right time.
- Will assist you in communicating with your physician and pharmacist, including helping you with refilling prescriptions.
- Will work with you and your physician to reduce your overall medication costs by eliminating duplication of medications and/or unnecessary medications.
- Will find answers to your questions about the medications you are taking and those that you may be considering.

Maintaining the correct medication schedule lowers your risk of needing additional Emergency Department visits or hospitalizations. Our Medication Management Service offers peace of mind for you and your caregivers by providing regular medication monitoring.
